

Protection, made by EADS.

Revolutionary wing design at Airbus is just one way that EADS technology is balancing our need to travel with our need to safeguard the environment. It helps the A380 burn 17 per cent less fuel per seat than rival aircraft. And Eurocopter is reducing helicopter noise levels ahead of its competitors. EADS makes the transport solutions the world needs. And helps to protect the things we value most. | www.eads.com/madebyeads
